ORIGINCHAIN

Application Screenshots

Blockchain-based quality assurance, authentication and supply-chain traceability for luxury cosmetics

1. Sign-in page with the five role-based demo accounts.
2. Supplier registering a raw-material batch.
3. Retail quality board: a failed seal check puts the batch on HOLD and blocks approval.
4. Uploading a certificate: the file's fingerprint is recorded on the blockchain.
5. Overview: product, key figures, four-stage quality journey and on-chain record.
6. Batches: raw material and the finished batch with its QR code and expiry countdown.
7. Quality board: all five checks (2 checks, 2 certificates, 1 final review) passed and sealed.
8. Certificate of Authenticity with custody chain, stage seals, blockchain hashes and QR code.
9. Public verification (no sign-in): the record matches the blockchain, so the product is Authentic.
10. Admin activity log: every action attributed to the signed-in user.
11. Admin governance: product specifications, evidence issuers, source reviews and change history.
12. Command palette (⌘K): jump to any screen, switch role or run a demo action.
13. Floating demo menu: stage shortcuts, admin tools and one-tap role switching.
14. About dialog explaining the project inside the app.
15. Overview in the Black & Gold dark theme.
16. Quality board in the dark theme.
17. Mobile layout: overview (full page).
18. Mobile layout: public verification (full page).
19. Tamper demonstration: the edited record no longer matches its blockchain fingerprint, so it shows as Suspicious.

Captured from the running application on a local Hardhat blockchain, October 2026. Fictional product and companies; educational demonstration.
